

Book Review

What's the title of this book?

When animals attack

Who wrote this book?

Paul Mason

What is the book all about?

It's about ferocious animals, how do they kill, where do they kill, how to fight back these animals, how to not get attacked by these ferocious animals like tigers, leopards, great white sharks, grizzly bears, hippopotamuses, salty water crocodile.

Most interesting part?

The most interesting part is Leopard one because I was amazed that they can camouflage. I was terrified that a Great White Shark got 300 razor sharp teeth. This fish you do not want to meet! About half of all shark attacks are properly by a Great White shark.

This book is so interesting you can read this book to learn about these dangerous animals.
