COMMON:

The Amazon is one of the most famous rainforests in the world, with many species of insects living there. Similarly, Sherwood Forest is also a famous forest which is home to various species of insects. The Amazon river flows through the Amazonian rainforest, which is important for the inhabitants there, likewise, Sherwood Forest has four rivers which flow through it and are important to life there also. The inhabitants of the amazon rainforest are roughly 250,000. Also, Sherwood Forest has inhabitants which can still be found today.

DIFFERENT:

Although the Amazonian rainforest and Sherwood Forest have similarities, they also have some differences. The first is they are located in different parts of the world. The Amazon is located in South America, whereas Sherwood Forest is located in Nottinghamshire, UK. The Amazon is a type of rainforest, on the other hand, Sherwood is a Royal Forest. The Amazon rainforest differs from Sherwood Forest in size. The Amazon is 5.5million square kilometres and Sherwood is only 4 square kilometres. Finally, the Amazon differs because of its age, it is at least 55 million years old while Sherwood is only 12,000 years old.
