

Dear Amelia,

I am still upset about coming away to live here in Baghdad, even with the issue of leaving you and the rest of my friends behind. I can't help but say, your Baghdad is great!

We get great education and the adults are advancing in Science & math by the minute. The teachers teach in Arabic and other languages, M.C. is a daily subject which is best and it is our religion, Islam! We get laughs about all the stories of the Prophets and our Prophet Muhammad. I am learning about fractions at the moment. Do you know what they are? I will teach you next time we see each other.

Baghdad was built in 752 and it is in a 1km diameter circle. km means 1000 meters and a kilo meter is 1000 meters. Diameter is the distance between the two ends that are the furthest away from each other. We learned this in math and history too. We never run out of good and do good business. The adults and researchers also trade their information. Maybe one day they'll trade it with you.

I hope I get to see you soon - Maysa
